Sustainable  
Finnish Maritime

Finnish Marine Industries' ResponSea initiative is about creating sustainable maritime together for the future world. The Finnish marine industry develops the sustainability of its products and its network together throughout the industry, and informs of the positive outcome its actions have on the society and the environment.

The Finnish marine industry is known for its ecological solutions reducing the emissions of the marine transportation. Sustainability is a valued part of the industry's companies' actions. Co-operation is essential, as the Finnish marine industry is known for its extensive delivery network, in which the entire network's actions affect the sustainability of the product.

ResponSea focuses on reducing the environmental impact of shipping and shipbuilding, continuous development of the industry's companies as fair employers, monitoring the sustainability of the delivery chain and enhancing circular economy and lifecycle efficiency in all actions. In our vision, the marine industry's processes stress the environment and the people as little as possible.

### VISION:

**Together we create sustainable maritime for the future world.**

**Our actions result in an economical and sustainable vessel, equipment and systems.**

ResponSea encourages the companies of a rather heterogeneous industry to define their own commitments for accomplishing the goals of sustainable development and at the same time developing the company's operations. In addition, the program monitors the industry's progress in sustainability and the results will be published.

United Nations' sustainable development goals have been implemented in The Finnish Society's Commitment to Sustainable Development. The Commitment 2050 comprises 8 goals and Finnish Marine Industries has defined, in co-operation with the companies of the industry, which goals of sustainable development the industry should emphasize.

### FINNISH MARINE INDUSTRIES' SUSTAINABILITY THEMES

- Reducing the environmental impact of marine transportation
- Continuous improvement as fair employers
- Monitoring the sustainability of the delivery chain
- Enhancing circular economy and lifecycle efficiency
